Subject: Comment on Milligan-E Preliminary PLN50803 SPT

Hey there. I live in the neighborhood and often walk/bike on the easement road on the south edge of this property. For much of the winter a small pond forms immediately north of the gravel easement road on this parcel. In heavy rains that small pond overflows and becomes a stream flowing across the gravel easement road and down into properties towards the water.

It would seem that run-off and drainage would be a concern of building multiple new properties on this site, which is the low point between Falk Road and the drive and houses to the west.

Thanks,

Jonathan Williams
